

Designing UI

Mine Çetinkaya-Rundel

@minebocek 
mine-cetinkaya-rundel 
mine@stat.duke.edu 

- Web application UI is ultimately HTML/CSS/JavaScript
- Let R users write user interfaces using a simple, familiar-looking API...
- ...but no limits for advanced users

Interface builder functions

tags

```
> names(tags)
 [1] "a"           "abbr"        "address"     "area"        "article"
 [6] "aside"      "audio"       "b"           "base"        "bdi"
[11] "bdo"        "blockquote" "body"        "br"          "button"
[16] "canvas"     "caption"     "cite"        "code"        "col"
[21] "colgroup"   "command"    "data"        "datalist"    "dd"
[26] "del"        "details"    "dfn"         "div"         "dl"
[31] "dt"         "em"         "embed"       "eventsource" "fieldset"
[36] "figcaption" "figure"     "footer"      "form"        "h1"
[41] "h2"         "h3"         "h4"         "h5"          "h6"
[46] "head"
[51] "i" → <i> some text </i>
[56] "kbd"
[61] "link"       "mark"       "map"         "menu"        "meta"
[66] "meter"     "nav"        "noscript"    "object"      "ol"
[71] "optgroup"  "option"     "output"     "p"           "param"
[76] "pre"       "progress"   "q"          "ruby"        "rp"
[81] "rt"        "s"          "samp"       "script"      "section"
[86] "select"    "small"     "source"     "span"        "strong"
[91] "style"     "sub"       "summary"    "sup"         "table"
[96] "tbody"     "td"        "textarea"   "tfoot"       "th"
[101] "thead"    "time"      "title"      "tr"          "track"
[106] "u"        "ul"        "var"        "video"       "wbr"
```

tag → HTML

```
> tags$b("This is my first app")  
<b>This is my first app</b>
```

Header tags

```
library(shiny)

# Define UI with tags
ui <- fluidPage(
  tags$h1("First level heading"),
  tags$h2("Second level heading"),
  tags$h3("Third level heading")
)

# Define server fn that does nothing :)
server <- function(input, output) {}

# Create the app object
shinyApp(ui = ui, server = server)
```

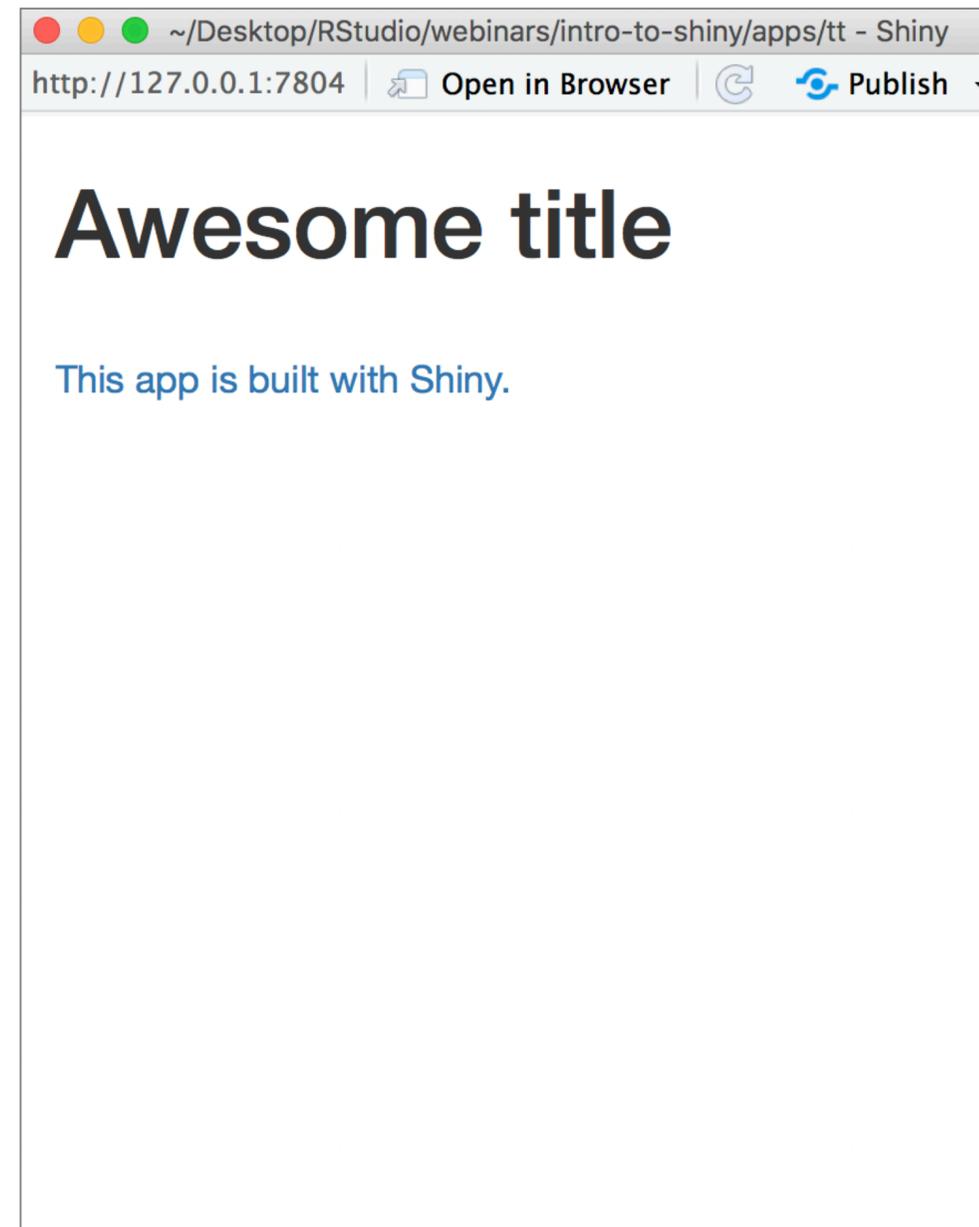

Linked text

```
library(shiny)

# Define UI with tags
ui <- fluidPage(
  tags$h1("Awesome title"),
  tags$br(), # line break
  tags$a("This app is built with
Shiny.", href = "http://
shiny.rstudio.com/")
)

# Define server fn that does nothing :)
server <- function(input, output) {}

# Create the app object
shinyApp(ui = ui, server = server)
```

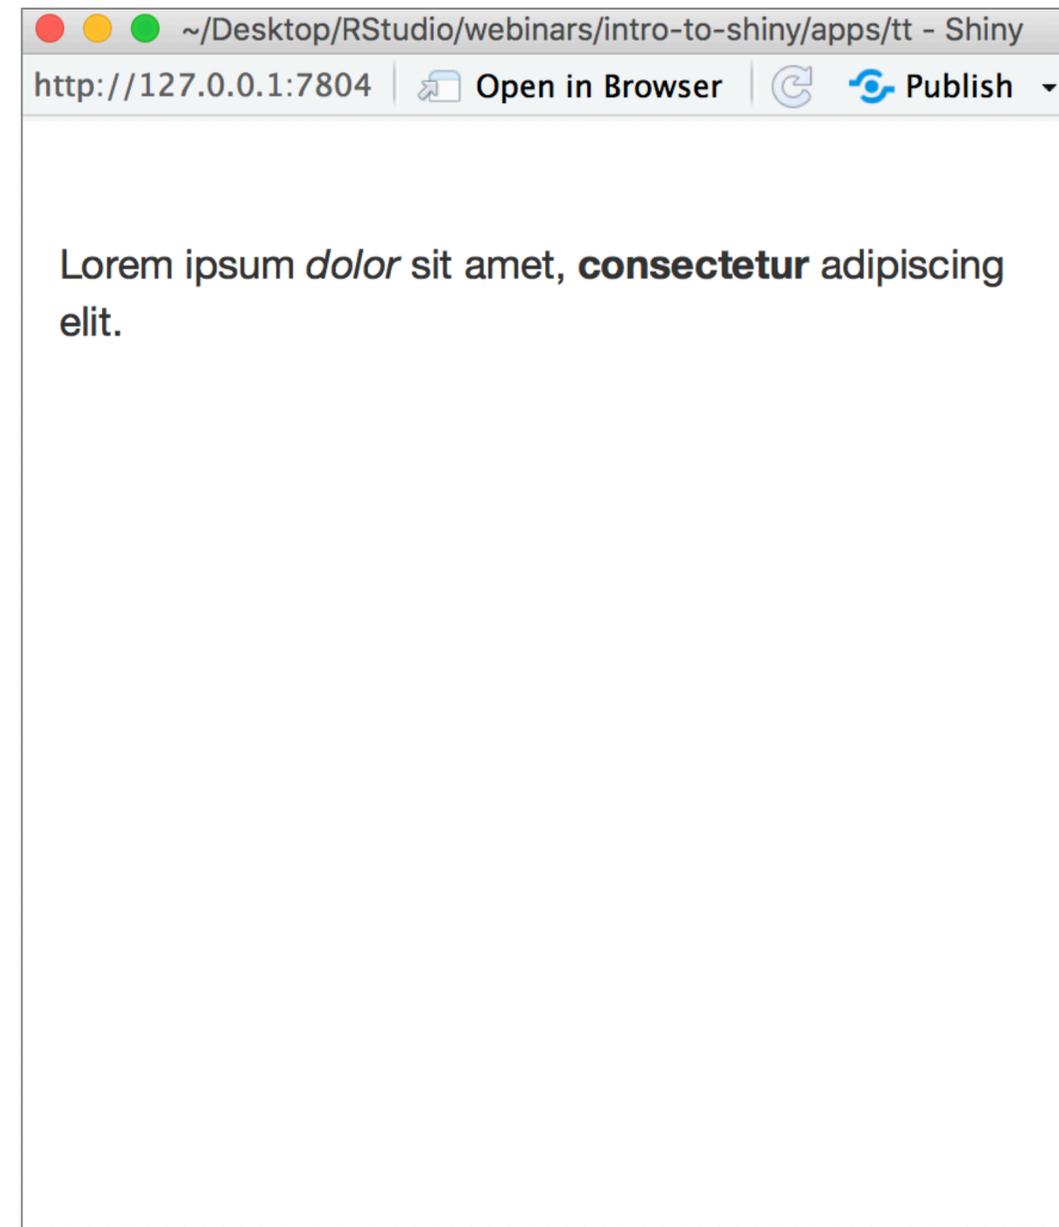

Nested tags

```
library(shiny)

# Define UI with tags
ui <- fluidPage(
  tags$p("Lorem ipsum",
    tags$em("dolor"), "sit amet,",
    tags$b("consectetur"),
    "adipiscing elit.")
)

# Define server fn that does nothing :)
server <- function(input, output) {}

# Create the app object
shinyApp(ui = ui, server = server)
```

Common tags

tags\$p(...)	→	p(...)
tags\$h1(...)		h1(...)
tags\$h2(...)		h2(...)
tags\$h3(...)		h3(...)
tags\$h4(...)		h4(...)
tags\$h5(...)		h5(...)
tags\$h6(...)		h6(...)
tags\$a(...)		a(...)
tags\$br(...)		br(...)
tags\$div(...)		div(...)
tags\$span(...)		span(...)
tags\$pre(...)		pre(...)
tags\$code(...)		code(...)
tags\$img(...)		img(...)
tags\$strong(...)		strong(...)
tags\$em(...)		em(...)
tags\$hr(...)		hr(...)

Common tags

```
> tags$a("Anchor text")
<a>Anchor text</a>
> a("Anchor text")
<a>Anchor text</a>

> tags$br()
<br/>
> br()
<br/>

> tags$code("Monospace text")
<code>Monospace text</code>
> code("Monospace text")
<code>Monospace text</code>

> tags$h1("First level header")
<h1>First level header</h1>
> h1("First level header")
<h1>First level header</h1>
```

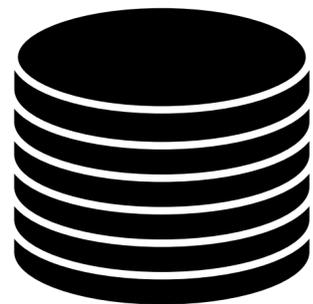

HTML

```
> HTML("Hello world, <br/> and then a line break.")  
Hello world, <br/> and then a line break.
```

Let's build a movie browser app!

`movies-apps/data/movies.Rdata`

Data from IMDB and Rotten Tomatoes on random sample of 651 movies released in the US between 1970 and 2014

Your turn

- Start with `movies-apps/movies.R`.
- Add some helper text to the app using tags that let your users know how to navigate the app.

Tabs

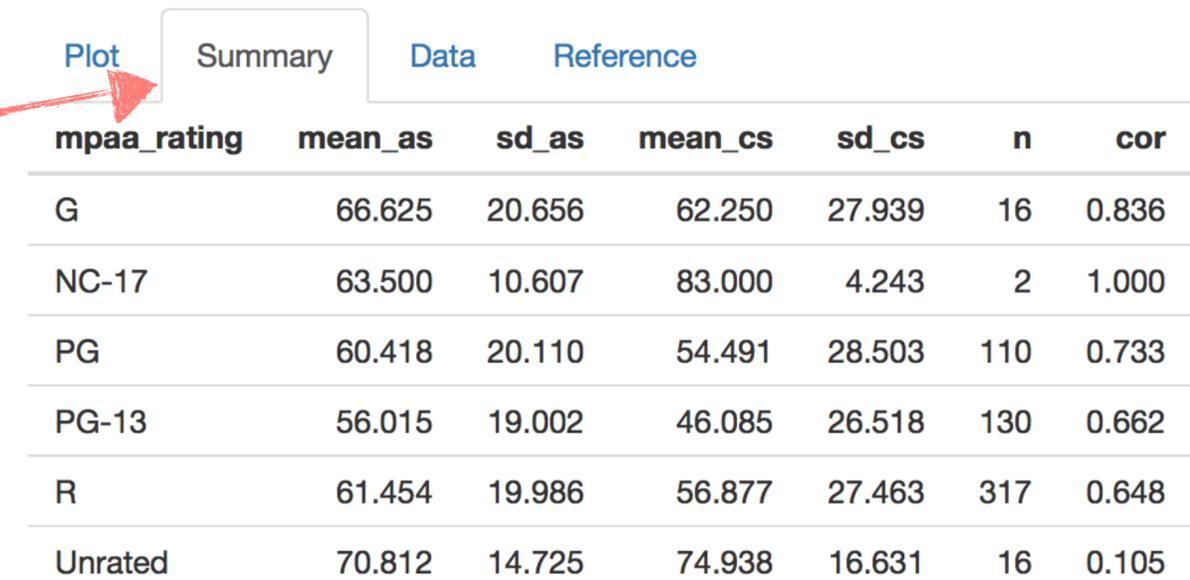

tabPanel()

```
mainPanel(  
  tabsetPanel(type = "tabs",  
    tabPanel("Plot", plotOutput("plot")),  
    tabPanel("Summary", tableOutput("summary")),  
    tabPanel("Data", DT::dataTableOutput("data")),  
    tabPanel("Reference",  
      tags$p("There data were obtained from",  
        tags$a("IMDB", href = "http://www.imdb.com/"), "and",  
        tags$a("Rotten Tomatoes", href = "https://  
www.rottentomatoes.com/"), "."),  
      tags$p("The data represent", nrow(movies), "randomly samplec  
movies released between 1972 to 2014 in the United States.")  
    )  
  )  
)
```

tabPanel()

```
mainPanel(  
  tabsetPanel(type = "tabs",  
    tabPanel("Plot", plotOutput("plot")),  
    tabPanel("Summary", tableOutput("summary")),  
    tabPanel("Data", DT::dataTableOutput("data")),  
    tabPanel("Reference",  
      tags$p("There data were obtained from",  
        tags$a("IMDB", href = "http://www.imdb.com/"), "and",  
        tags$a("Rotten Tomatoes", href = "https://  
www.rottentomatoes.com/"), "."),  
      tags$p("The data represent", nrow(movies), "randomly sampled  
movies released between 1972 to 2014 in the United States.")  
    )  
  )  
)
```

Tabs and reactivity

navlistPanel()

```
mainPanel(  
  navlistPanel(tabPanel("Plot", plotOutput("plot")),  
               tabPanel("Summary", tableOutput("summary")),  
               tabPanel("Data", DT::dataTableOutput("data")),  
               tabPanel("Reference",  
                 tags$p("There data were obtained from",  
                       tags$a("IMDB", href = "http://www.imdb.com/"), "and",  
                       tags$a("Rotten Tomatoes", href = "https://  
www.rottentomatoes.com/"), "."),  
                 tags$p("The data represent", nrow(movies), "randomly  
sampled movies released between 1972 to 2014 in the Unite  
States."))  
            )  
  )  
)
```

Your turn

- Continue working on `movies-apps/movies.R`.
- Split the app into two tabs: one for plot and the other for data table.
- **Stretch goal:** Add another tab for summary statistics and references.

10_m 00_s

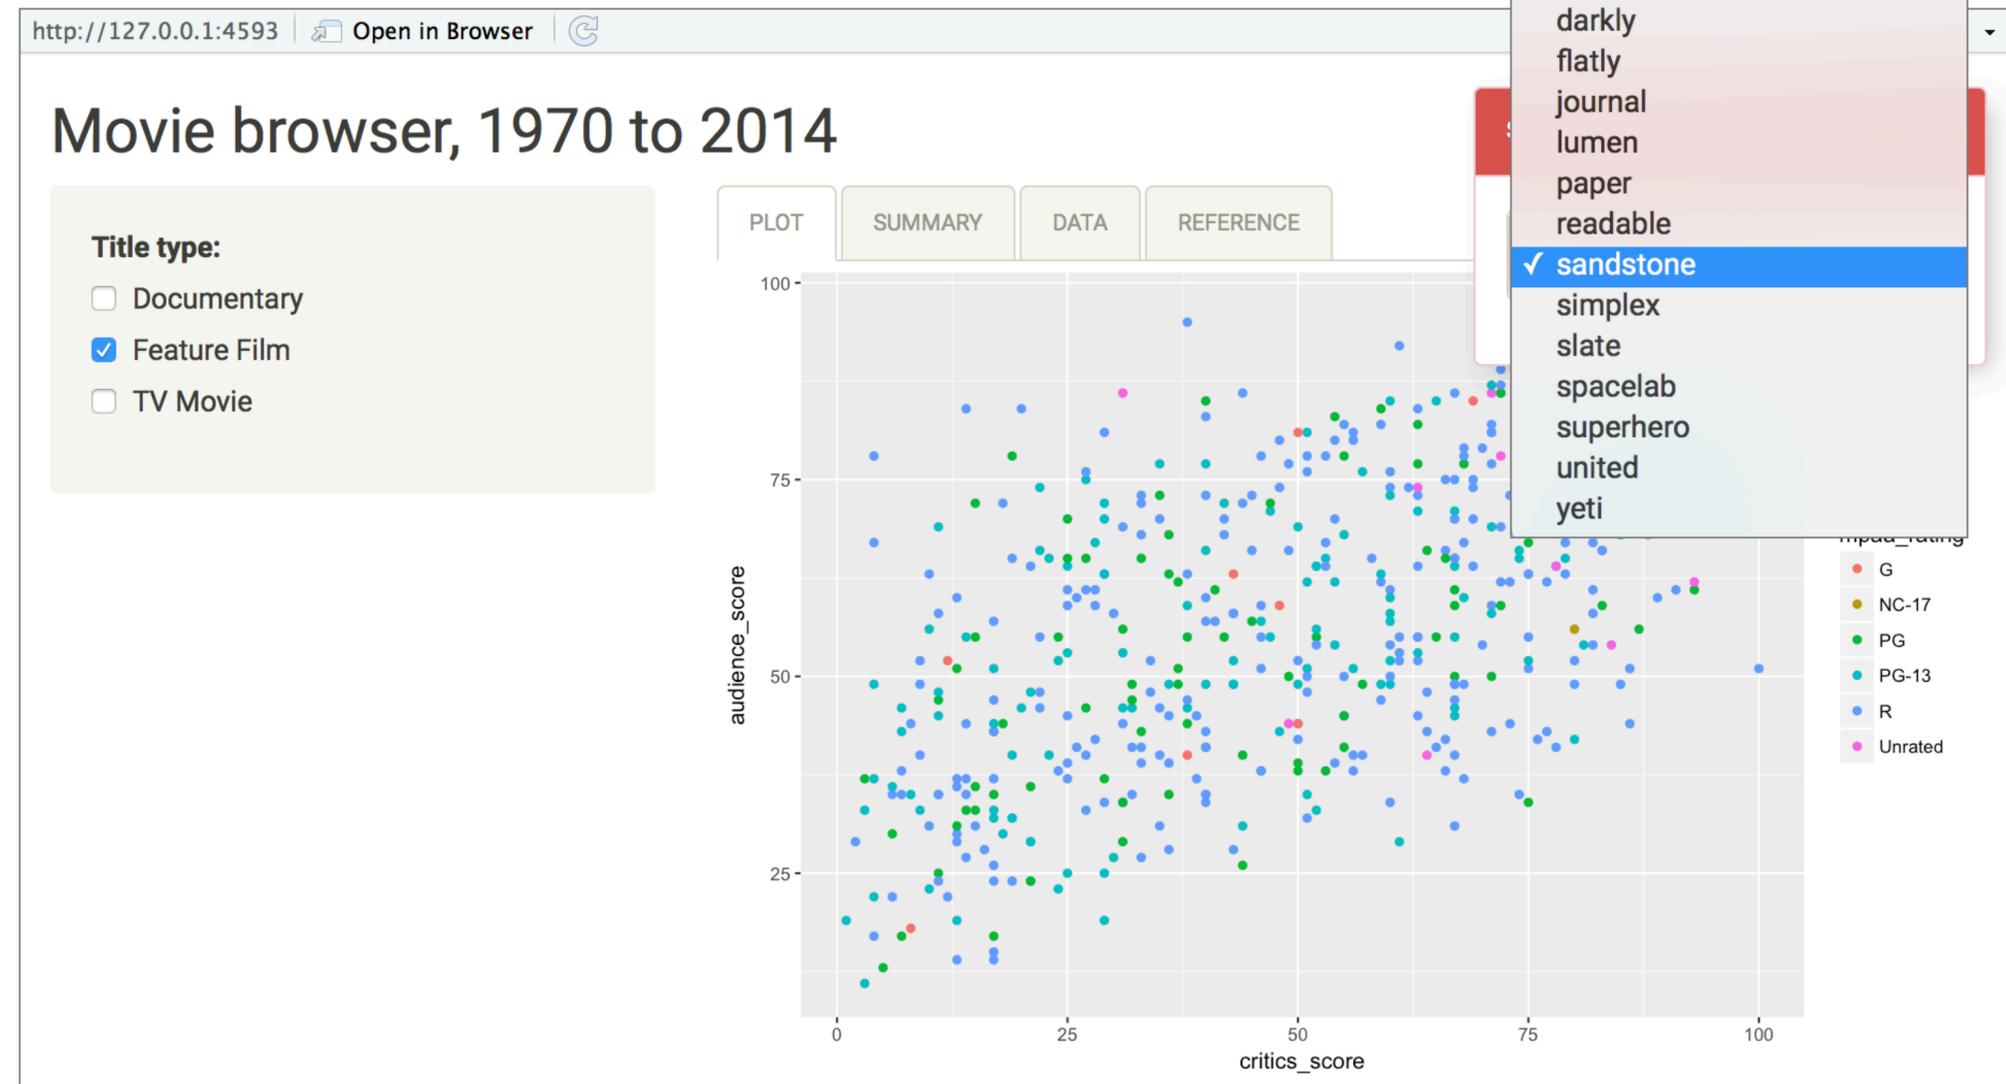

shinythemes

```
library(shiny)
library(shinythemes)
```

```
ui <- fluidPage(
  themeSelector(),
  ...
)
```

shinythemes

Your turn

- Continue working on `movies-apps/movies.R`.
- Add the theme selector, browse various themes, and pick a theme and apply it.
- Don't forget to remove the selector once you're done picking a theme.
